

She Knows This Route. She Still Doesn't Feel Safe.

A woman walks home along a familiar London street. She's harassed. She doesn't report it — she's reported things before, and nothing changed. So next time, she just takes a different route.

The Scale of the Problem

83%

of young women in London experienced harassment or assault in public spaces in the last 2 years

82%

feel unsafe walking alone in parks after dark; 50% on quiet streets near home

70%+

of UK women have experienced sexual harassment in public spaces

UN Sustainable Development Goal 5 — Gender Equality

This project directly addresses SDG 5: achieving gender equality and empowering all women and girls.

The Problem Isn't Knowledge. It's Trust.

Women know how to report. They choose not to — because they've stopped believing it makes a difference.

4%

of women who experience harassment ever
report it to officials

45%

don't report because they don't believe
anything will change

The Result

She avoids the route. The problem stays invisible. Nothing improves.

This is a **trust gap** — not a reporting gap. Until women believe their voice leads to action, avoidance will always feel safer than speaking up.

Sources: 4% figure from UK Government Equalities Office survey on sexual harassment; 45% from Women's Aid research on reporting barriers.

Why Now? The Moment is Here

This isn't hypothetical. Government and institutions are actively funding and prioritising women's safety in London right now.

01

Sadiq Khan's £15.6m Fund (announced 4 September 2026)

Dedicated funding for safer streets, parks, and public spaces for women and girls — delivered via City Hall, MOPAC, and TfL.

Built on a 2024 five-borough pilot that gathered direct feedback from women and girls.

02

Part of a Wider £37m VAWG Strategy

Women's safety is now a strategic priority across London's institutions.

03

The Safer Streets Fund (£120m+ since 2020)

The national fund now accepts bids from civil society organisations — not just police and councils. This is our pathway to scale.

The window is open. Institutions are ready to act. They're waiting for the data and tools to do it.

Why Reporting Fails Today

Fragmented

Police reports, social media posts, council complaints — scattered across disconnected systems with no unified picture of where harm is happening.

Silent

Women who report never see evidence that anything changed. There is no confirmation, no follow-up, no visible outcome — the feedback loop is completely broken.

Unactionable

Data sits in silos, disconnected from decision-makers. Institutions can't see the full pattern, so they don't know where to focus resources or when to intervene.

Momentum

Our Solution: Close the Loop

Most safety tools only go one direction — women report, and nothing comes back. **Momentum** is different. It creates a full feedback loop that connects reports, institutions, and visible outcomes — rebuilding the trust that makes women feel safe enough to reclaim public spaces.

→ Aggregate

Unifies user reports, police data, and social signals into a single safety picture — no more silos

→ Act

Translates that intelligence into specific, prioritised calls to action for councils, businesses, and police

→ Close the Loop

Women see real updates — resolved, in progress, or scheduled — proving that their voice drove change

The goal is not to label spaces as dangerous — it's to fix them. Momentum is about reclaiming public spaces, not stigmatizing them.

How It Works

Momentum runs as a **closed-loop system** — every report flows through aggregation and institutional action, then feeds back to the user as visible, real-world change. The loop never breaks.

This Model Works

Crowdsourced safety reporting has a proven track record — driving demand, shaping policy, and sustaining civic engagement.

Hollie Guard & WalkSafe

Demand is real and immediate. 950,000+ combined users mobilised after high-profile incidents — proving people will report when the tool is accessible.

Safecity / Safetipin

Data creates policy. Drove streetlight repairs in Delhi, patrol route changes, and women-only bus licences in Nepal — aggregated reports became institutional action.

FixMyStreet

Feedback loops sustain behaviour. Visible status updates showing what happened after a report build public trust and keep communities reporting long-term.

Visible status updates are the critical link — when users see their reports lead to action, reporting behaviour becomes self-sustaining.

What Success Looks Like

These are the four metrics judges should use to evaluate the demo:

1

Areas drop off the safety map

Resolved hotspots disappear from the map as conditions durably improve — not just flagged, but fixed

2

Footfall increases in avoided spaces

Streets and parks that were previously shunned show measurable, trackable increases in pedestrian use

3

Surveyed women report feeling safer

In-app surveys capture genuine, sustained improvements in perceived safety — not just one-off responses

4

Reports age out as problems are resolved

Incidents close because the underlying issue was fixed — the log shrinks, not just grows

Momentum

Watch the Closed Loop in Action

The demo is the centrepiece of Momentum. Follow the full journey — from a woman reporting an unsafe incident through to visible change on the ground — and watch for the moment the loop closes.

1

Report

A woman submits an unsafe incident via the app

2

Aggregate

Her report surfaces a verified hotspot on the data layer

3

Act

The council receives prioritised, actionable intelligence

4

Close

She sees the result: *"14 new streetlights installed this month; zone now Purple Flag accredited."*

Watch for the closed loop — this is what makes Momentum different. Not just a reporting tool. A system that proves action was taken.
